Replenishment Pod

SectorFlow

Stockouts seen early, every PO approved by a planner · October 2026

Reorder points live in a spreadsheet and one planner's head, revisited once in a while, and a stockout usually surfaces when a customer calls. **The pod reads demand nightly and stock hourly, drafts each purchase order with its reasoning for a planner to approve, flags exceptions before they become stockouts, and answers for the stockout rate.**

What happens on each run

No agent can place a purchase order: the one write to your ERP runs only when a planner clicks Approve. Feeds are read-only, and reorder rules and supplier terms change only when your team changes them.

Agents we build and run · Your systems, untouched · Your team keeps authority · Control plane, live first

The number

Stockout rate

Share of SKU-days a sellable item sat at zero stock at a site that sells it. Secondary: lost sales avoided, excess stock trimmed. Your baseline is set in writing in week one.

Baseline	Excess trimmed	Hours returned
in writing, week one	overstock caught before the PO	planner time, per month

Counted from tool results and planner decisions, by site and category, reported the first business day of each month. Findings are named each month, such as the supplier behind most misses.

What it costs

One monthly price Starts day one. Set in writing before you sign, from your SKU count, sites and suppliers.	**monthly**
Setup, weeks 1 to 8 Portal, baseline, test set, shadow run, checkpoint.	**inside it**

How it starts: progress you can see from week one

Week 1	Weeks 2 to 3	Weeks 3 to 6	Weeks 6 to 8	Then
Portal live	Your test set	Shadow run	Checkpoint	Live, number reported monthly
map and baseline	your hardest reorders, scored	POs drafted beside your planners	you decide: go live or leave	one site first, then the rest

Your lead walks you through the portal every two weeks. If the pod won't move your number, we say so at the checkpoint and you leave with the map and baseline.

What is whose

Yours

- Your ERP, reorder rules and supplier terms
- Every purchase order decision
- Full audit log, exported on exit
- On exit: data, rules, 30 days of transition help

SectorFlow's

- Agent design, integrations, quality gate
- Building, hosting, tuning, releases
- A named lead accountable for the number
- Hosting and model costs, inside the price

If the number does not move

2 months no improvement over baseline after go-live	**10 business days** written remediation plan from us
3 more months still below the agreed threshold	**30 days' notice** you exit, no early-termination liability

One question. What share of your SKU-days last quarter had zero stock at a site that sells the item? If nobody can answer it in a number, that is the first finding. Reply, or book 20 minutes with Jake.
